

# Quality Assurance Process

Claire Le Goues  
November 7, 2019

# How to get developers to [write tests | use static analysis | appreciate testers]

Claire Le Goues  
November 7, 2019

# Learning Goals

- Understand process aspects of QA
- Describe the tradeoffs of QA techniques
- Select an appropriate QA technique for a given project and quality attribute
- Decide the when and how much of QA
- Overview of concepts how to enforce QA techniques in a process
- Select when and how to integrate tools and policies into the process: daily builds, continuous integration, test automation, static analysis, issue tracking, ...
- Understand human and social challenges of adopting QA techniques
- Understand how process and tool improvement can solve the dilemma between features and quality

Throughout the case studies,  
look for nontechnical challenges  
and how they were addressed  
(social issues, process issues, ...)

# CASE STUDY: GOOGLE'S TRICORDER

# Case Study

- Context (goals, stages)
- Problems
- Insights
- Solutions
- Lessons learned transferable to other companies?

# Integrate Static Analysis in Review Process

- Static analysis as bots in code review tool
  - Automatically applied on each commit
  - Results visible to author and reviewers
- Lightweight checkers, easy to add and modify
- Feedback buttons to indicate ineffective checkers

Sadowski, Caitlin, et al. "Tricorder: Building a program analysis ecosystem." 2015 IEEE/ACM 37th IEEE International Conference on Software Engineering. Vol. 1. IEEE, 2015.

```
package com.google.devtools.staticanalysis;
```

```
public class Test {
```

Caveat: this stuff isn't how they do things anymore!

## **CASE STUDY: QA (PREVIOUSLY) AT MICROSOFT**

A problem has been detected and windows has been shut down to prevent damage to your computer.

THREAD\_NOT\_MUTEX\_OWNER

If this is the first time you've seen this Stop error screen, restart your computer. If this screen appears again, follow these steps:

Check to make sure any new hardware or software is properly installed. If this is a new installation, ask your hardware or software manufacturer for any windows updates you might need.

If problems continue, disable or remove any newly installed hardware or software. Disable BIOS memory options such as caching or shadowing. If you need to use Safe Mode to remove or disable components, restart your computer, press F8 to select Advanced Startup Options, and then select Safe Mode.

Technical information:

\*\*\* STOP: 0x00000011 (0x00234234,0x00005345,0x05345345,0xFFFFFFFF)

NATIONAL BESTSELLER

"A meticulous accounting of how Microsoft operates...A blueprint for any company...  
facing fast-paced markets and harrowing competition." —Business Week

# Microsoft SECRETS

How the World's Most Powerful Software Company

Creates Technology,

Shapes Markets,

and Manages People

Michael A. Cusumano

Richard W. Selby

WITH A NEW PREFACE BY THE AUTHORS

# Microsoft's Culture

- Hiring the best developers
  - “Microsoft can achieve with a few hundred top-notch developers for what IBM would need thousands”
- Giving them freedom
- Teams for products largely independent
- Relatively short development cycles
  - Version updates (eg. Excel 3->4) 1-2 month
  - New products 1-4 years
  - Driven by release date
- Little upfront specification, flexible for change and cutting features

# Early Days (1984): Separate testing from development

- after complaints over bugs from hardware manufacturers (eg. wrong computations in BASIC)
- customers complained about products
- IBM insisted that Microsoft improves process for development and quality control
- Serious data-destroying bug forced Microsoft to ship update of Multiplan to 20000 users at 10\$ cost each
- Resistance from developers and some management (incl. Balmer):  
“developers could test their own products, assisted on occasion by high school students, secretaries, and some outside contractors”
- Hired outside testers
- Avoided bureaucracy of formal inspections, signoff between stages, or time logging
- Separate testing group; automated tests; code reviews for new people and critical components

# Early Days (1986): Testing groups

- “Developers got lazy”, relied on test team for QA
- “Infinite defects” - Testers find defects faster than developers can fix them
- Late and large integrations (“big bang”) - long testing periods, delayed releases
- Mac Word 3 desaster: 8 month late, hundreds of bugs, including crashing and data destroying bugs; 1M\$ for free upgrades
- Pressure on delivering quality grew

# 1989 Retreat and “Zero defects”

- see memo

# Zero-Defect Rules for Excel 4

- All changes must compile and link
- All changes must pass the automated quick tests on Mac and Windows
- Any developer who has more than 10 open bugs assigned must fix them before moving to new features

# Testing Buddies

- Development and test teams separate, roughly similar size
- Developers test their own code, run automated tests daily
- Individual testers often assigned to one developer
  - Testing their private releases (branch), giving direct, rapid feedback by email before code is merged

# Testers

- Encouraged to communicate with support team and customers, review media evaluations
- Develop testing strategy for high-risk areas
- Many forms of testing (internally called): unstructured testing, ad hoc testing, gorilla testing, free-form Fridays

# Early-mid 90s

- Zero defect goal (1989 memo)
- Milestones (first with Publisher 1.0 in 1988)
- Version control, branches, frequent integration
- Daily builds
- Automated tests (“quick autotest”) - must succeed before checkin
- Usability labs
- Beta testing (400000 beta testers for Win 95) with instrumentation
- Brief formal design reviews; selected code reviews
- Defect tracking and metrics
- Developers stay in product group for more than one release cycle

# Metrics

- Number of open bugs by severity
  - Number of open bugs expected to decrease before milestone
  - All know severe bugs need to be fixed before release
  - Severity 1 (product crash), Severity 2 (feature crash), Severity 3 (bug with workaround), Severity 4 (cosmetic/minor)
  - Metrics tracked across releases and projects
- Performance metrics
- Bug data used for deciding when “ready to ship”
  - Relative and pragmatic, not absolute view
  - “The market will forgive us for being late, but they won't forgive us for being buggy”

# Challenges of Microsoft's Culture

- Little communication among product teams
- Developers and testers often “not so well read in with software-engineering literature, reinventing the wheel”
  - Long underestimated architecture, design, sharing of components, quality metrics, ...
- Developers resistant to change and “bureaucracy”

# Project Postmortem

- Identify systematic problems and good practices (10-150 page report)
  - document recurring problems and practices that work well
  - e.g.,
    - breadth-first → depth-first & tested milestones
    - insufficient specification
    - not reviewing commits
    - using asserts to communicate assumptions
    - lack of adequate tools → automated tests
    - instrumented versions for testers and beta releases
    - zero defect rule not a priority for developers
- Circulate insights as memos, encourage cross-team learning

# Process Audits

- Informal 1-week audits in problematic problems
- Analyzing metrics, interviewing team members
- Recommendations to pick up best practices from other teams
  - daily builds, automated tests, milestones, reviews

# The 2002 Trustworthy Computing Memo

<http://news.microsoft.com/2012/01/11/memo-from-bill-gates/>

# Code Reviews

- Own code review tools (passaround style)
- Internal studies on how effective reviews are
- Internal tools to improve code reviews

A problem has been detected and windows has been shut down to prevent damage to your computer.

The problem seems to be caused by the following file: SPCMDCON.SYS

PAGE\_FAULT\_IN\_NONPAGED\_AREA

If this is the first time you've seen this Stop error screen, restart your computer. If this screen appears again, follow these steps:

Check to make sure any new hardware or software is properly installed. If this is a new installation, ask your hardware or software manufacturer for any windows updates you might need.

If problems continue, disable or remove any newly installed hardware or software. Disable BIOS memory options such as caching or shadowing. If you need to use Safe Mode to remove or disable components, restart your computer, press F8 to select Advanced Startup options, and then select Safe Mode.

Technical information:

\*\*\* STOP: 0x00000050 (0xFD3094C2,0x00000001,0xFBFE7617,0x00000000)

\*\*\* SPCMDCON.SYS - Address FBFE7617 base at FBFE5000, DateStamp 3

# SLAM/SDV (since 2000)

- Goal: Reducing blue screens, often caused by drivers
- Driver verification tool for C
- Model checking technology
- Finds narrow class of protocol violations
  - Use characteristics of drivers (not general C code)
  - Found several bugs in Microsoft's well tested sample drivers
- Fully automated in Microsoft compiler suite
- Available for free
- Enforcement through driver certification program

Ball, Thomas, Vladimir Levin, and Sriram K. Rajamani. "A decade of software model checking with SLAM." Communications of the ACM 54.7 (2011): 68-76.

# SLAM

- Compelling business case: eliminated most blue screens
- Based on basic science of model checking: originated in university labs with public funding

# 2010: Agile

- Web-based services and C++ evolution requires faster iteration
- Embrace of agile methods
- Massive reduction of testing team (from two testers per developers toward one): developers now expected to do their own testing

# Annotation

- How to motivate developers, especially with millions of lines of unannotated code?
- Microsoft approach:
  - Require annotations at checkin (e.g., Reject code that has a `char*` with no `__ecount()`)
  - Make annotations natural, like what you would put in a comment anyway
    - But now machine checkable
    - Avoid formality with poor match to engineering practices
  - Incrementality
    - Check code design consistency on every compile
    - Rewards programmers for each increment of effort
      - Provide benefit for annotating partial code
      - Can focus on most important parts of the code first
      - Avoid excuse: I'll do it after the deadline
  - Build tools to infer annotations
    - Inference is approximate and so annotations may need to be changed, but saves work overall.
    - Unfortunately not yet available outside Microsoft

# SAGE

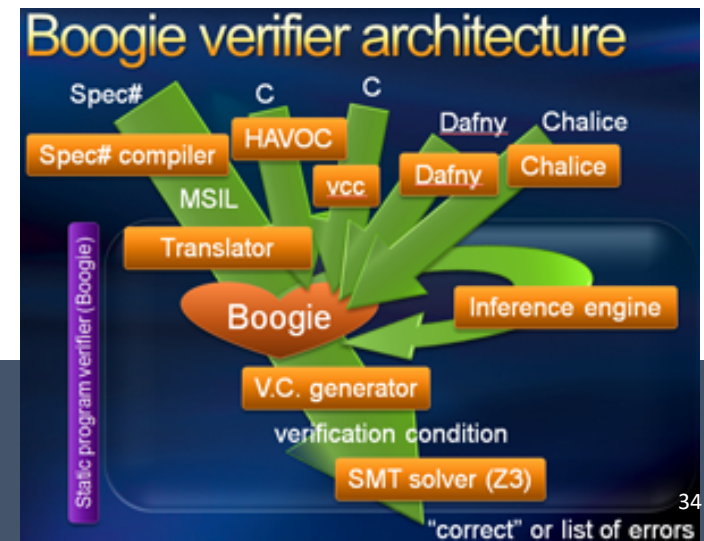

- White-box fuzz testing (symbolic-execution-based test generation)
- Especially for security issues in file and protocol parsing routines
  - “found many previously-unknown security vulnerabilities in hundreds of Microsoft applications, including image processors, media players, file decoders and document parsers”
- In-house SMT constraint solver (Z3)
- From research project to large-scale deployment
  - Running at scale on 200 machines

# Bug prediction

- Metrics
- Mining software repositories
- Example results:
  - Distributed development not critical, but organizational distance is
- Now prioritizing testing effort

# Boogie, Dafny, ...

- Intermediate Verification Language
- “Usable formal verification”
  - Dafny language...
- Active research today...

Cusumano and Selby. Microsoft Secrets.

# Prepare servicing strategy for Windows 10 updates

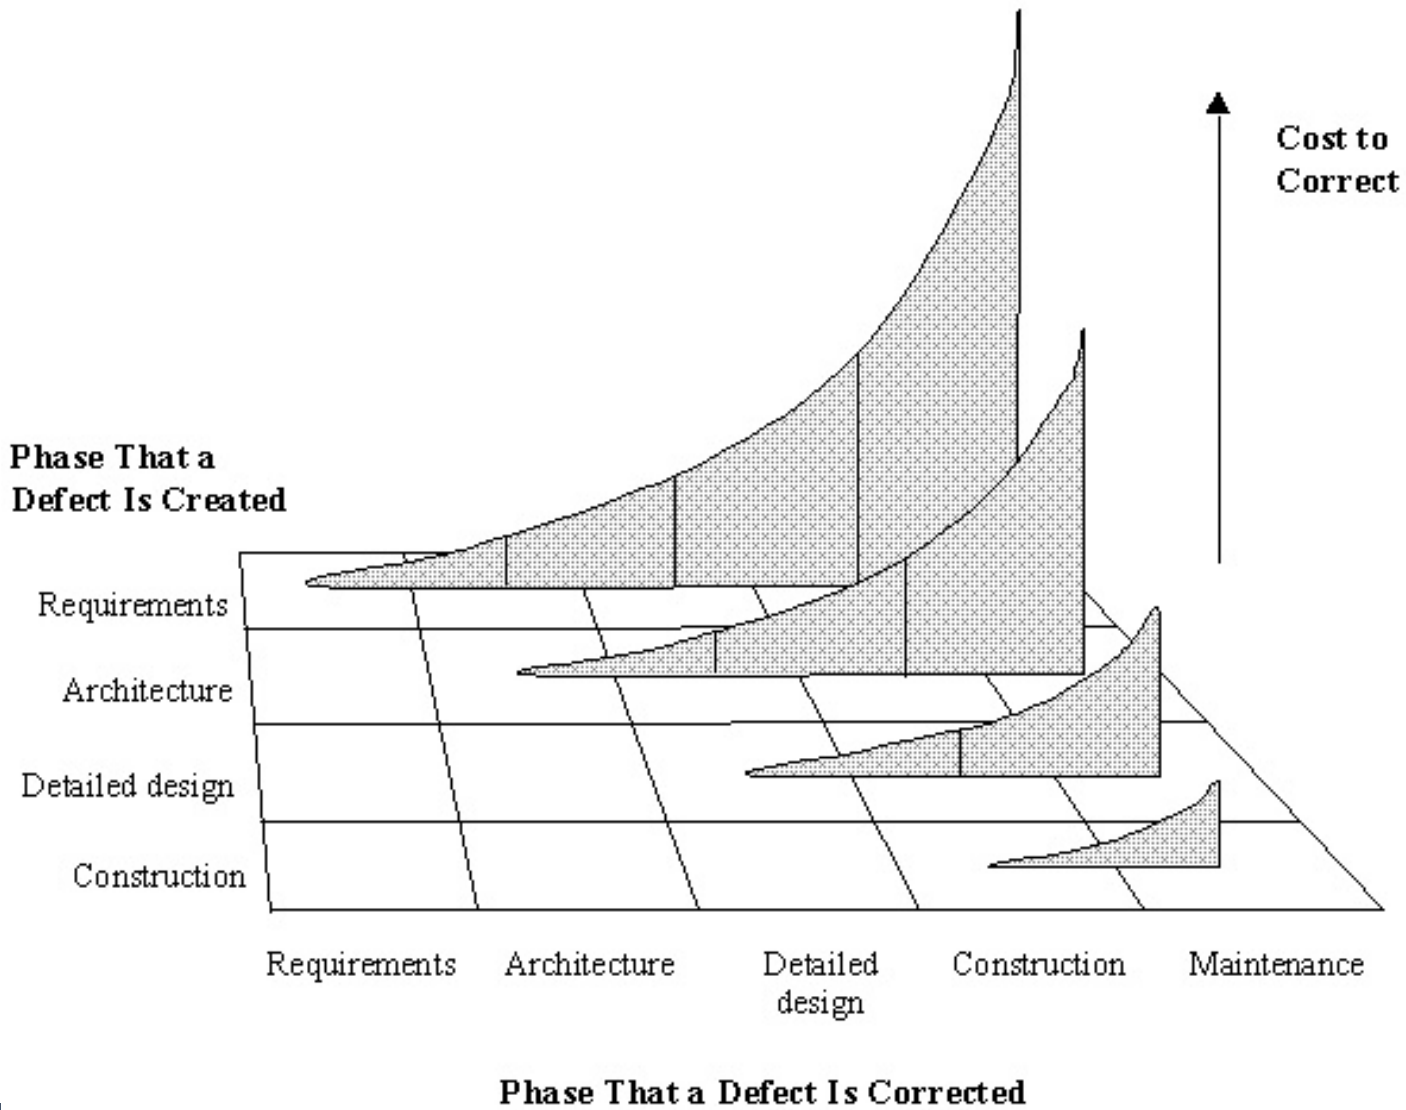

📅 07/26/2017 • ⌚ 6 minutes to read • Contributors 

# QA Process Considerations

- We covered several QA techniques:
  - Formal verification (15-112)
  - Unit testing, test driven development
  - Various forms of advanced testing for quality attributes (GUI testing, fuzz testing, ...)
  - Static analysis
  - Dynamic analysis
  - Formal inspections and other forms of code reviews
- But: When to use? Which techniques? How much? How to introduce? Automation? How to establish a quality culture? How to ensure compliance? Social issues? What about external components?

# Qualities and Risks

- What qualities are required? (requirements engineering)
- What risks are expected?
- Align QA strategy based on qualities and risks

# Example: SQL Injection Attacks

<http://xkcd.com/327/>

Which QA strategy is suitable?

# Example: Scalability

twitter

© 2009 Twitter About Us Contact Blog Status API Help Jobs TOS Privacy

# Example: Usability

Which QA strategy is suitable?

# QA Tradeoffs

- Understand limitations of QA approaches
  - e.g. testing vs static analysis,  
formal verification vs inspection, ...
- Mix and match techniques
- Different techniques for different qualities

# QA WITHIN THE PROCESS

# QA as part of the process

- Have QA deliverables at milestones (management policy)
  - Inspection / test report before milestone
- Change development practices (req. developer buy-in)
  - e.g., continuous integration, pair programming, reviewed checkins, zero-bug static analysis before checking
- Static analysis part of code review (Google)
- Track bugs and other quality metrics

# Defect tracking

- Issues: Bug, feature request, query
- Basis for measurement
  - reported in which phase
  - duration to repair, difficulty
  - categorization
    - > root cause analysis
- Facilitates communication
  - questions back to reporter
  - ensures reports are not forgotten
- Accountability

# Enforcement

- Microsoft: check in gates
  - Cannot check in code unless analysis suite has been run and produced no errors (test coverage, dependency violation, insufficient/bad design intent, integer overflow, allocation arithmetic, buffer overruns, memory errors, security issues)
- eBay: dev/QA handoff
  - Developers run FindBugs on desktop
  - QA runs FindBugs on receipt of code, posts results, require high-priority fixes.
- Google: static analysis on commits, shown in review
- Requirements for success
  - Low false positives
  - A way to override false positive warnings (typically through

# Continuous Integration with Travis-CI

The screenshot displays the Travis CI web interface. At the top, there is a navigation bar with 'Home', 'Stats', 'Blog', and 'Docs' links, and a user profile for 'miles'. A search bar is located on the left side. Below the search bar, there are tabs for 'Recent' and 'My Repositories'. The 'Recent' tab is active, showing a list of recent builds. The main content area shows a detailed view of a build for 'rails/rails'. The build is currently running, indicated by a green dot. The build details include the commit hash 'f3e079e (master)', the author 'Vijay Dev', and the message 'Merge pull request #4248 from andrew/2012 Updated copyright notices for 2012'. Below the build details is a 'Build Matrix' table with columns for Job, Duration, Finished, Rvm, and Env. The right sidebar shows a list of workers and their queues, including 'Common', 'NodeJs', 'Php', 'Rails', 'Erlang', and 'Spree'. A 'Fork me on GitHub' banner is visible in the top right corner.

# SOCIAL ASPECTS

# Social issues

- Developer attitude toward defects
- Developer education about security
- Using peer pressure to enforce QA practices
  - Breaking the build – various rules

# Social issues

- Developer vs tester culture
- Testers tend to deliver bad news
- Defects in performance evaluations?
- Issues vs defects
- Good test suits raise confidence, encourage shared code ownership

# Reporting Defects

- Reproducible defects
- Simple and general
- One defect per report
- Non-antagonistic
  - (testers usually bring bad news)
  - State the problem
  - Don't blame

## To much is to much

I am fed up of all the bugs.  
Production never update i must go through the army to updaye the production  
disconnection very often  
loss of gold and forge point  
loss of life points of soldiers without fighting  
diasapearing soldiers  
and at las but not least my copper foundry diasapered while i was trying to change its emplacement.

YOU ARE SORRY FOR ALL THESE INCONVIENIENCE,I KNOW, YOU ARE GOING TO SAY IT IS BECAUSE IT S A BETA,I KNOW  
BUT THIS GAME SUCKS FROM THE TOP TO THE BOTTOM,PAY 10 MONKEYS AS DEVELLOPERS AND YOU WILL HAVE THE SAME RESULTS.  
BY THE WAY IF YOU WANT TO TEST A CAR BEFORE BUYING IT YOU DO NOT HAVE TO PAY,HERE WITH THE DIAMONDS OPTION IS YOU WANT TO BUY THE CAR OK, YOU WANT TO TEST IT OK SO YOU MUST PAY.  
SO PLEASE THIS TIME NO APOLOGISE,I NEED EXPLANATION AND NOT AS BETA BLA BLA BLA.  
IS INNO CIE ARE BELONGING TO BANKSTERS GANG?

merlynch •

adier-General

you DO NOT have to buy diamonds. its your choice, and you should r  
diamonds are paying for this game to be developed. if your so upset  
bottom then don't let the door hit you in the a\$\$ on the way out ☺

Hi,

I am a security researcher at Carnegie Mellon University, and my team has found thousands of crashes in binaries downloaded from debian wheezy packages. After contacting [owner@bugs.debian.org](mailto:owner@bugs.debian.org), Don Armstrong advised us to contact you before submitting ~1.2K bug reports to the Debian BTS using [maintonly@bugs.debian.org](mailto:maintonly@bugs.debian.org) (to avoid spamming `debian-bugs-dist`).

We found the bugs using Mayhem [1], an automatic bug finding system that we've been developing in David Brumley's research lab for a couple of years. We recently ran Mayhem on almost all ELF binaries of Debian Wheezy (~23K binaries) [2], and it reported thousands of crashes.

Our goal here is to make our bug reports as complete and accurate as possible. To minimize duplicates, we are reporting only one crash per binary, and at most 5 crashes per package. This amounts to ~1.2K crashes. Moreover, to ensure accuracy, we confirmed all the crashes by re-running them in a fresh unstable installation. Finally, we also filter out assertion failures for now, as they seemed less important. In short, every report is reproducible and actionable.

You can download the list of affected packages, with their maintainers [3], generated with `dd-list`, as well as a sample bug report for `gcov-4.6` [4]. The bug report contains:

- 1) the bug report that will be mailed to [maintonly@bugs.debian.org](mailto:maintonly@bugs.debian.org) (`report.txt`)
- 2) a testcase reproducing the crash in `./crash/`
- 3) information about the crash in `./crash_info/`: a core dump (`core`), the output of the crash (`crash_output.txt`), the `dmesg` of the crash (`dmesg.txt`), as well as the exit status (`exit_status.txt`).

This is a lot of bugs, and we want to make sure we're doing bug reports right, so that we don't make anyone angry by spamming the BTS with bad reports. Please let us know if the reports are good enough to proceed with the filing, or if any additional information should be
